## Simplifying surds

Getting ready for A-Level Maths...

*"The most important investment you can make is in **yourself**."*

# Simplifying surds

## What is a surd?

A **surd** is the answer to a root (square root, cube root etc) which is an **irrational** number (i.e. it is a non-terminating, non-recurring decimal).

# Simplifying surds

## Important rules

$$\sqrt{a} \times \sqrt{b} = \sqrt{a \times b}$$

$$\frac{\sqrt{a}}{\sqrt{b}} = \sqrt{\frac{a}{b}}$$

## Be careful...

$$\sqrt{a} + \sqrt{b} \neq \sqrt{a + b}$$

$$\sqrt{a} - \sqrt{b} \neq \sqrt{a - b}$$

## What is the midpoint?

The midpoint is the point on a line segment that divides the segment into two equal parts.

We can calculate the midpoint by finding the halfway point between the two  $x$ -coordinates,  $x_1$  and  $x_2$ , and the halfway point between the two  $y$ -coordinates,  $y_1$  and  $y_2$ .

Given two points  $(x_1, y_1)$  and  $(x_2, y_2)$ , the midpoint can be found using the formula:
